Re: AFIR for NPDES Phase II MS4 General Stormwater Permit Year 14
Third Notice of Intent Year 1

Enclosed is the County of DuPage's Annual Facility Inspect Report (AFIR) for the National Pollutant Discharge Elimination System Phase II MS4 General Stormwater Permit ILR40 for permit year 14. This report includes activities that were undertaken and achieved for all of DuPage County. Thirty one municipalities and nine township highway districts have chosen to participate as cooperating permit holders in our countywide local qualifying effort for this permit program as requested by the IEPA Division of Water Pollution Control Permit Section to meet the six control measures of Public Education and Outreach, Public Participation/Involvement, Illicit Discharge Detection and Elimination, Construction Site Runoff Control, Post-Construction Runoff Control, and Pollution Prevention/Good Housekeeping for Municipal Operations.

The following list of county, municipalities, and township highway districts permit numbers are included as participating in the enclosed report of permit achievements for the 14th year of the permit term:

Municipality	ILR40 MS4 Permit #
DuPage County	0502
Village of Addison	0227
Village of Bartlett	0286
Village of Bensenville	0292
Village of Bloomingdale	0295
Village of Carol Stream	0308
City of Darien	0180
Village of Downers Grove	0183
City of Elmhurst	0187
Village of Glen Ellyn	0199
Village of Hanover Park	0347
Village of Hinsdale	0355
Village of Lemont	0497
Village of Lombard	0378
City of Naperville	0396
City of Oakbrook Terrace	0232
Village of Roselle	0437
Village of Villa Park	0463

DUPAGE COUNTY NPDES PERMIT # ILR400502 SECTION A

No changes were made to Best Management Practices during the reporting year from the County of DuPage 2016 Notice of Intent, Permit No. ILR40 0502 dated May 16, 2016

DUPAGE COUNTY NPDES PERMIT # ILR400502 SECTION B

Section A:

Public Education and Outreach

A1. Distribution of Paper Material

Goal:

Develop and distribute both paper and electronic material regarding the control of pollutants from seasonal sources and activities.

Milestone (Year 1):

Develop or update 1 brochure or packet.

Status:

During the reporting year, DuPage County Stormwater staff created or updated the following educational materials:

Brochures

- Pet Waste
- Rain Barrel Benefits
- Sustainable Lawn Care
- Springing Into Summer
- Falling Into Winter
- Know Your Watershed: Back to Basics

Booklets

Homeowners' Guide to Preventing & Repairing Flood Damage

These and other educational materials are distributed at events, at the DuPage County offices, are shared with municipalities and townships for distribution, and are available on our website:

https://www.dupageco.org/EDP/Stormwater_Management/1163/

DUPAGE COUNTY NPDES PERMIT # ILR400502

A2. Speaking Engagement

Goal:

Engage interested parties through presentations detailing water quality trends for DuPage County waterways and highlighting practices that can reduce the transport of pollutants along with stormwater into those same waterways.

Milestone (Year 1):

Conduct 5 presentations.

Status:

DuPage County Stormwater staff presents at and hosts educational workshops and conferences throughout the county to educate the public as well as professionals about water quality trends and issues. Workshops are held in every major watershed at least twice per year. Some of these workshops are open to all members of the public, while others are specific training for stormwater professionals. The following presentations were made by DuPage County Stormwater staff during the reporting year:

DUPAGE COUNTY NPDES PERMIT # ILR400502

A3. Public Service Announcement

Goal:

Disburse press releases, public service announcements, and messages through social media to residents of the entirety of DuPage County. These messages detail water quality trends for DuPage County waterways and highlight practices that can reduce the transport of pollutants along with stormwater into those same waterways.

Milestone (Year 1):

Broadcast 8 messages detailing water quality trends.

Status:

During the reporting year, DuPage County Stormwater staff disbursed information on water quality trends, largely though social media.

- Monthly Newsletter with approx. 4,000 subscribers http://www.dupageco.org/stormwater/news.aspx
- Facebook, Twitter & Instagram with more than 400 followers
 <u>www.twitter.com/lovebluedupage</u>
 <u>www.facebook.com/lovebluedupage</u>
 www.instagram.com/lovebluedupage
- YouTube with nearly 20 outreach/training videos with more than 5,000 combined views https://www.youtube.com/user/lovebluelivegreen

DUPAGE COUNTY NPDES PERMIT # ILR400502

A4. Community Event

Goal:

Present, through booths, workshops, or presentations water quality issues to members of the community. Presentations detail water quality trends for DuPage County waterways and highlighting practices that can reduce the transport of pollutants along with stormwater into those same waterways.

Milestone (Year 1):

Host or attend 2 events to educate the public on water quality trends.

Status:

DuPage County Stormwater staff attends, presents at, and hosts events throughout the county to educate the public about water quality trends and issues. Many of these events are open to all members of the public. During the reporting year, DuPage County Stormwater staff hosted and attended the following events:

A5. Classroom Educational Material

Goal:

Educate school aged children regarding the basic principles of watersheds and practices to reduce the transfer of pollutants to waterways, including rain gardens, rain barrels, permeable pavers, green roofs, native plants, bioswales, and various source control measures.

Milestone (Year 1):

Outreach programs with 300 students in attendance.

Status:

DuPage County promoted student and teacher education of water quality topics by supporting S.C.A.R.C.E. (School and Community Assistance for Recycling and Composting Education. The following activities were conducted by S.C.A.R.C.E. and supported by DuPage County during the reporting year:

Section B:

Public Participation/ Involvement

B3. Stakeholder Meeting

Goal:

Organize or serve as a principal participant in a stakeholder meeting that addresses matters pertaining to pollutant reduction on a watershed level.

Milestone (Year 1):

Hold 6 watershed stakeholder meetings per year.

Status:

DuPage County staff held 6 watershed stakeholder meetings throughout the county during the reporting year. These events are open to all members of the public.

Event	Date	Location	# of Attendees	NPDES Category	Involvement
Salt Creek Workshop	8-Mar-16	Addison	40	Education & Outreach	Host, Speaker
East Branch DuPage River Workshop	13-Apr-16	Downers Grove	45	Education & Outreach	Host, Speaker
West Branch DuPage River Tour	28-Apr-16	Multiple	40	Education & Outreach	Host, Speaker

East Branch DuPage River Watershed Green Workshop	16-Nov-16	Downers Grove	40	Education & Outreach	Host, Speaker

DUPAGE COUNTY NPDES PERMIT # ILR400502

B4. Public Hearing

Goal:

Conduct a meeting for the public to provide input as to the adequacy of the established Stormwater Management Program.

Milestone (Year 1):

Hold one meeting per year for the public to provide input.

Status:

The DuPage County Stormwater Management Planning Committee regularly holds monthly meetings on the first Tuesday of each month at 7:30am. At the beginning of each meeting, there is a public comment period which allows members of the public to provide input on the County's Stormwater program. The following meetings were held during the reporting year:

- March 1, 2016
- April 5, 2016
- May 3, 2016
- June 7, 2016
- July 5, 2016- Cancelled
- August 2, 2016
- September 6, 2016
- October 4, 2016
- November 1, 2016
- December 6, 2016
- January 3, 2017
- February 7, 2017

DUPAGE COUNTY NPDES PERMIT # ILR400502

B6. Program Involvement

Goal:

Conduct assessments to gauge citizen and partner views, behaviors, and concerns pertaining to a variety of topics, including water quality, property management, and residential pollutant control.

Milestone (Year 1):

Develop and disburse 1 assessment per year.

Status:

Surveys were distributed to attendees of the following events:

- Green Infrastructure Design & Maintenance for MS4 Communities
- Green Infrastructure & Grants workshop

DuPage County staff created the "Citizen Reporter App" which provides citizens the opportunity to participate in the water quality program by identifying areas for water quality improvements. By using the app, citizens can report water quality issues such as erosion, stream blockages, algae, dumping, sediment, garbage, and other water quality issues. The Citizen Reporter App can be accessed at:

https://gis.dupageco.org/CitizenReporter/

DUPAGE COUNTY NPDES PERMIT # ILR400502

B7. Other Public Involvement

Goal:

Host events, such as Adopt-a-Stream, River Sweep, and Storm Drain Stenciling, where residents are engaged in reducing the transport of pollutant from waterways within DuPage County.

Milestone (Year 1):

Involve at least 400 participants in public events per year.

Status:

DuPage County has continued to support public involvement programs to engage residents in reducing the transport of pollutants from waterways within DuPage County.

Adopt-A-Stream

Adopt-A-Stream was initiated by DuPage County Stormwater Management in 1995. The program encourages citizen-based stewardship of the County's water resources to keep them healthy, clean and attractive. It supports the belief that everyone can make a difference in the aquatic habitats and general appeal of the County's waterways. Since The Conservation Foundation (TCF) started administering the program, it has grown from 5 participants to 36 groups or individuals. Last year, four of the groups have qualified for signs because they have been cleaning their river or stream sections for two years, at least two times per year. This year another four groups are qualified for signs. This year we had 256 volunteers remove 2,816 lbs of trash from the rivers and streams.

Our kickoff workshop was held on September 15, 2016 at the Forest Preserve District of DuPage County's Urban Stream Research Center. There were 15 people registered for the event and one of them adopted a stream section along the West Branch.

2016 Adopt-A-Stream Statistics

Number of Volunteer Groups: 37

Number of Volunteers: 256

Number of bags of trash: 386

Estimated pounds of trash: 2,816 lbs.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Conservation @ Home and Conservation @ Work

The Conservation @ Home and Conservation @ Work programs promote the use of native landscaping, rain gardens and rain barrels to homeowners, businesses and developers in DuPage County.

Conservation @ Home/Work provides a way to educate the citizens of DuPage County about storm water and provides them with the resources they can use to improve water quality on their properties. Staff conducts evaluations and certifications of residential properties, school campuses and business properties throughout the county. The Conservation Foundation also provides information and resources for planting and maintaining certified properties and promotes the program through presentations and partnerships. Twenty (20) homes were certified this year. Another 40 homes are in progress sites for certification in the Conservation @ Home program. This year York High School was certified. We are currently working with Edward Hospital to get their campuses ready for certification.

In conjunction with the Conservation @ Home program, the rain barrel program has been very successful. Nine hundred (900) rain barrels have been distributed throughout the county. The rain barrel programs and promotions are occurring in the following DuPage County communities: Addison, Carol Stream, Glen Ellyn, Elmhurst, Villa Park, Lombard, Downers Grove, Warrenville, Wheaton, West Chicago, Naperville, Aurora, Roselle, Lisle, Westmont and Woodridge. There is a county-wide link for DuPage residents to purchase rain barrels. Residents have the option to pick-up their rain barrel or they can have it delivered. There is also a video instructing homeowners on how to install a rain barrel connection on the TCF website.

2016-17 Storm Drain Stenciling

DuPage County supported the Storm Drain Stenciling Program through The Conservation Foundation throughout DuPage County, including townships, municipalities, scouting groups and ecology clubs, to help educate residents about nonpoint-source pollution from stormwater runoff.

There were two school groups, an Eagle Scout, a scout group and a 4-H club involved in the storm drain program. This year we had 69 volunteers participating in the Storm Drain Stenciling program.

Volunteer Statistics

- Number of Participants: 116 (including elementary schools, boy scouts, eagle scouts, residents, and the Village of Westmont)
- Number of door hangers posted: 276
- Number of drains stenciled: 454
- Communities Stenciled: Hanover Park, Lisle, Naperville, Warrenville, Wheaton, Westmont
- Communities continuing permanent drain covers: Addison, Bloomingdale Township, Bolingbrook, Elmhurst, Lisle, Warrenville, Westmont Wheaton

DUPAGE COUNTY NPDES PERMIT # ILR400502

2016 River Sweep

This past year was the 25th anniversary of the River Sweep since its inception in 1991. Since then there have been more than 11,700 volunteers that have removed approximately 261 tons of debris. This year more than 9 tons of debris was collected and 3.75 acres of land were restored to native habitat by over 800 volunteers. TCF staff promoted and coordinated the DuPage County River Sweep by encouraging municipal, park district and township coordination of local clean-up areas and volunteer recruitment. Restoration activities at selected sites were facilitated through coordination with the Forest Preserve District of DuPage County. The purpose of the event is to encourage volunteers to "sweep" our rivers clean. In addition to completing the clean-up, volunteers were able to complete 3.75 acres of restoration by removing buckthorn, honeysuckle and garlic mustard. The program brochure, a reduced poster sample and a press release is included with this report.

2016 DuPage River Sweep

Date of Event: May 20, 2017

Number of Participants: 893 volunteers

Area Covered: Approx. 97 miles

Tons of Litter Removed: Approximately 6.6 tons

- West Branch -70.66 miles
 - o Carol Steam 47.36 miles
 - Naperville Downtown Riverwalk, Edgewater, Pioneer
 - Park Dorothy Weigand Park 4.02 miles
 - Naperville-McDowell Grove FP 1.03 miles
 - Naperville-Springbrook I mile
 - Warrenville, St. Charles Rd. to Blackwell 12 miles
 - o Warrenville-Kleinwachter I mile
 - o Wheaton-Winfield Mound 1.75 miles
 - Winfield- 1.5 miles
- East Branch/ Salt Creek -26.01 miles
 - o Addison Salt Creek 3 miles
 - o Bolingbrook, Hidden Lake 3.5 miles
 - o Darien-Ward's Creek -.5 miles
 - O Downers Grove Maple Grove F.P. .56 miles
 - o Glen Ellyn Churchill Woods I.15 miles
 - o Itasca, Springbrook Creek 4 miles
 - Lisle, Community Park, Hitchcock Woods 1.65 miles
 - o Lisle, Morton Arboretum/Hidden Lake 2 miles
 - Lombard 2 miles
 - Oak Brook 5 miles
 - Wood Ridge-Greene Valley 2.65 miles

DUPAGE COUNTY NPDES PERMIT # ILR400502

Section C:

Illicit Discharge Detection and Elimination

C1. Storm Sewer Map Preparation

Goal:

Collect and compile, from a variety of sources, storm sewer maps. These maps identify the locations of storm sewer outfalls discharging into the Waters of the State. The desired end product is one comprehensive, countywide storm sewer atlas.

Milestone (Year 1):

Complete the storm sewer atlas for 50% of DuPage County.

Status:

DuPage County Stormwater staff continues to work with townships, municipalities, and other county departments to update the storm sewer atlas with current storm sewer locations. The following updates were completed within the reporting year:

Agency	Date
DuPage County Public Works	3-14-16
Naperville Township	3-29-16
Lisle Township	3-29-16
Milton Township	4-4-16
Village of Downers Grove	4-4-16
Village of Addison	4-20-16
Village of Itasca	4-28-16
York Township	4-28-16
Wayne Township	4-28-16
Village of Wooddale	5-3-16
Village of Glen Ellyn	5-27-16

	2016 ANNUAL FACILITY INSPECTION REPORT	
	DUPAGE COUNTY NPDES PERMIT # ILR400502	
Addison Township		6-10-16
Village of Woodridge		7-14-16
Village of Bensenville		5-10-17
Village of Hanover Park		5-16-17

During the 2016-2017 reporting year, DuPage County Stormwater began the process to combine all storm sewer data for the county into one comprehensive GIS database. Currently each agencies data is in a separate shapefile. Combining this data into one comprehensive layer will simplify tracing and spill response within DuPage County.

DUPAGE COUNTY NPDES PERMIT # ILR400502

C3. Detection/ Elimination Prioritization Plan

Goal:

Compile information pertaining to the ten step prioritization plan identified in the DuPage County IDDE Program Technical Guidance.

Milestone (Year 1):

Complete steps 1 & 2 in the prioritization process.

Status:

Step 1- Define IDDE waterway segments

DuPage County Stormwater Department has three full time staff members who provide GIS mapping support and services for all aspects of watershed planning and management. Comprehensive stream data has been delineated and mapped for all DuPage County streams. DuPage County has six watershed planning areas including: Salt Creek, East Branch of the DuPage River, West Branch of the DuPage River, Sawmill Creek, Des Plaines River Tributaries, and the Fox River Tributaries. The major watersheds, which include Salt Creek, East Branch DuPage River, and West Branch DuPage River, are first divided into subwatersheds. Each larger watershed contains between 10 and 20 subwatersheds. These subwatersheds have been further divided into segments of varying length. The mainstem of each tributary is typically one segments as is each tributary to the subwatershed. These reaches will be used for the outfall inspection prioritization process.

Step 2- Delineate Subbasins

Each of the six watershed planning areas in DuPage County (Salt Creek, East Branch of the DuPage River, West Branch of the DuPage River, Sawmill Creek, Des Plaines River Tributaries, and the Fox River Tributaries) have been further divided into catchments. These catchments have been established and are currently used for hydraulic modeling purposes. Catchment boundaries are created using site topography, the countywide storm sewer atlas, and schematic data such as bridges, road crossings, and representation of the stream system. These same catchment areas are also being used for outfall prioritization.

DUPAGE COUNTY NPDES PERMIT # ILR400502

C5. Illicit Source Removal Procedures

Goal:

Distribute educational materials pertaining to illicit discharges to DuPage County residents and businesses. DuPage County maintains an Illicit Discharge Detection and Elimination Hotline, where interested parties are able to report suspect discharges from the storm sewer system into waterways located within DuPage County. Often, these reported discharges originate from an individual or business that is unaware of the implications of their activities.

Milestone (Year 1):

Distribute 10 letters, flyers, posters, brochures, or other public education tools.

Status:

County staff has created over 20 brochures and flyers for distribution as discussed earlier in the education and outreach section of this report. These publications are distributed at each event the County attends as an exhibitor (also discussed in education and outreach section). These documents are available on our website at:

https://www.dupageco.org/EDP/Stormwater Management/1163/

DUPAGE COUNTY NPDES PERMIT # ILR400502

C7. Visual Dry Weather Screening

Goal:

Perform the visual screening of MS4 outfalls discharging to Waters of the State during dryweather conditions.

Milestone (Year 1):

Inspect 10 percent of known outfalls.

Status:

During this reporting period, each of the 591 MS4 outfalls within the Salt Creek Watershed were visually inspected for illicit discharges. An additional 37 MS4 outfalls were visually inspected in Black Partridge, Willow Creek, Bensenville Ditch, and the West Branch DuPage River. Based on the results of the visual testing, field chemical tests were performed on 16 outfalls.

In addition, DuPage County staff recently began utilizing the ESRI Arc Collector app for outfall inspections. This allows us to track outfall inspections digitally, eliminating the need for paperwork. Outfall inspection and testing information is entered directly into the database, which is also linked to the outfall map. The storm sewer inventory is also being converted into the Arc Collector app. This allows staff to view the storm sewer atlas on a tablet or smartphone, which increases efficiency in illicit discharge tracing.

DUPAGE COUNTY NPDES PERMIT # ILR400502

C8. Pollutant Field Testing

Goal:

Conduct monitoring for the following chemical parameters when visual characterization of the discharge indicates an illicit nature: surfactants, ammonia, potassium, fluoride, conductivity, and pH.

Milestone (Year 1):

Chemically monitor 50% of outfalls releasing a suspected illicit discharge.

Status:

During routine monitoring of outfalls within the Salt Creek watershed, 124 outfalls were found to be flowing during dry weather periods (over 72 hours without rainfall over 0.1 inch). Most of the flowing outfalls had not observable indication of illicit discharges, such as color, odor, turbidity or floatables.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Section D:

Construction Site Runoff Control

D4. Site Plan Review Procedures

Goal:

Review construction permit submittals to identify opportunities for avoidance of impacts to channels, wetlands, and adjoining property and require all necessary erosion and sediment control plans.

Milestone (Year 1):

Review 100 construction permit submittals per year.

Status:

DuPage County Stormwater conducts reviews of permit applications for unincorporated DuPage County as well as several municipalities. During the reporting year, 180 reviews were conducted for Stormwater Permits, which contain wetlands, floodplain, over 2500 square feet of net new impervious area, or propose post-construction BMPs.

Total Number of Stormwater Permits reviewed					
Village of Addison	1				
Village of Bartlett	3				
Village of Bensenville	8				
Village of Burr Ridge	3				
Village of Clarendon Hills	1				
City of Darien	9				
Unincorporated DuPage Co.	87				
Elk Grove Village	2				
City of Elmhurst	2				
Village of Glendale Heights	2

Village of Wayne	6
City of West Chicago	12
Village of Westmont	2
City of Wheaton	9
Village of Winfield	3
City of Wood Dale	1
Total Countywide	180

DUPAGE COUNTY NPDES PERMIT # ILR400502

D6. Site Inspection/ Enforcement Procedures

Goal:

Inspect, in unincorporated areas of DuPage County, to ensure that disturbed sites meet soil erosion and sediment control requirements outlined in the DuPage County Countywide Stormwater and Flood Plain Ordinance. The Ordinance mandates that all developments provide both temporary and permanent erosion and sediment control and those developments disturbing one acre or greater of land shall comply with the requirements of general permit ILR10.

Milestone (Year 1):

Forty percent enforcement actions initiated, versus the total number of inspections performed per year.

Status:

A total of 1396 sediment and erosion control inspections were conducted in unincorporated areas by DuPage County staff on development sites during the reporting year. An inspection is required prior to any excavation or movement of soil. Additionally, all erosion control measures indicated on the approved grading plans must be in place and maintained until final grading approval. A total of 44 enforcement cases were conducted during that time period, which is 3% of the total inspections conducted.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Section E:

Post- Construction Runoff Control

E2. Regulatory Control Program

Goal:

Review of the regulatory framework established by the DuPage County Countywide Stormwater and Flood Plain Ordinance. Following review, the need for changes in the Ordinance text, performance of community audits, general certification adoption, or development of technical quidance may be recognized.

Milestone (Year 1):

Perform one regulatory activity.

Status:

- The DuPage County Countywide Stormwater and Flood Plain Ordinance (DCCSFPO) was reviewed in 2016 to determine if updates were needed in order to comply with the updated ILR40 permit. As the DCCSFPO is a countywide ordinance, the regulations apply to the entire county and all municipalities must be at least as stringent as the DCCSFPO. Staff is currently completing a review of the ILR40 and the DCCSFPO (last updated in 2013) to comply with additional requirements included with the 2016 revisions to the ILR40 permit (2016).
- DuPage County contracted with an engineering consultant to perform audits on 3 municipalities; the City of Elmhurst, the City of Darien, and the Village of Glendale Heights.
- A subgroup to the DuPage County Municipal Engineers group was created to provide technical assistance and guidance materials. This subgroup generated sample specifications for dry wells and rain gardens which can be provided to permit applications to be used as a template for the design of these practices on residential properties.

DUPAGE COUNTY NPDES PERMIT # ILR400502

E3. Long Term O&M Procedures

Goal:

Maintain DuPage County owned property on which native vegetation was established for pollutant control purposes. These properties typically contain riparian, wetland, or floodplain areas or post-construction best management practices.

Milestone (Year 1):

Maintain 55% of DuPage County owned properties that have been planted with native vegetation.

Status:

DuPage County Stormwater Management oversees the native vegetation management on all County-owned facilities and properties.

DuPage County owns a total of 38 properties throughout the county that have been planted with native vegetation and are managed as natural areas and naturalized stormwater facilities. In addition, there are 10 best management practices on the county campus that are planted with native vegetation. Over 100 inspections were conducted on these natural areas during the reporting year.

DUPAGE COUNTY NPDES PERMIT # ILR400502

E4. Pre-Construction Review of BMP Designs

Goal:

Certify, for permit approval, permit submittals. Approval is granted to submittals that are in compliance with the DuPage County Countywide Stormwater and Flood Plain Ordinance, which requires post-construction best management practices (PCBMPs) for all developments with a 2,500 square foot net increase in impervious surfaces.

Milestone (Year 1):

Certify 30% of permit submittals.

Status:

A total of 180 Stormwater Permits were submitted during the reporting year. Of these, a total of 63 permits which included post construction BMPs were approved by DuPage County during the reporting period, which constitutes 35%.

Total Number of Stormwater Permits Approved	
Village of Bartlett	1
Village of Bensenville	4
Village of Burr Ridge	2

Total Countywide	86

DUPAGE COUNTY NPDES PERMIT # ILR400502

E6. Post-Construction Inspections

Goal:

Conduct post-construction inspections at sites containing post-construction best management practices, wetland buffer, riparian enhancement, or wetland mitigation.

Milestone (Year 1):

Inspect 100 post-construction inspections per year.

Status:

Any development site that is proposed to be planted with native vegetation as part of the best management practice, wetland buffer, riparian enhancement, or wetland mitigation requirements for a Stormwater Management Permit is required to undergo an establishment period from 1 to 5 years, depending on the type of project and planting method. The permitee is required to conduct maintenance and monitoring of the planted native vegetation. Each site is inspected annually by county staff to ensure compliance. The following inspections were conducted by County staff during the reporting year:

	No. of	Sign
Municipality	Inspections	Offs
Bartlett	1	
Bensenville	11	1
Burr Ridge	10

DUPAGE COUNTY NPDES PERMIT # ILR400502

E7. Other Post-Construction Runoff Controls

Goal:

Annual training in current green infrastructure or low impact design techniques.

Milestone (Year 1):

Train 80% of applicable employees and contractors involved in the management of public surfaces.

Status:

On November 30, 2016, DuPage County Stormwater Management held a Green Infrastructure Design and Maintenance seminar. The county hosted the seminar which was free of charge to provide an opportunity for municipalities to receive training in Green Infrastructure in accordance with the annual training requirements of the ILR40. The following municipalities were in attendance. Additionally, the seminar was recorded and a video link was provided to all attendees to share with new and seasonal employees as well as employees who were not able to attend in person:

Municipality	Registered Attendees

Section F:

Pollution Prevention/ Good Housekeeping

F1. Employee Training Program

Goal:

Send staff to training to learn procedures and practices that will minimize the discharge of pollutants from municipal operations into the storm sewer system. Examples of training topics include automobile maintenance, hazardous material storage, landscaping and lawn care, parking lot and street cleaning, pest control, pet waste collection, road salt application and storage, roadway and bridge maintenance, spill response and prevention, and storm drain system cleaning.

Milestone (Year 1):

25% of staff members attending training per year.

Status:

On September 27, 2016 DuPage County partnered with the DuPage River Salt Creek Workgroup in holding the 2016 Public Roads Deicing Workshop. This workshop was free of charge to provide an opportunity for municipalities to receive training in Pollution Prevention in municipal operations in accordance with the annual training requirements of the ILR40.

DUPAGE COUNTY NPDES PERMIT # ILR400502

F2. Inspection and Maintenance Program

Goal:

Follow established procedures to remove accumulated timber debris from stormwater facilities that have potential to cause a regional stormwater problem.

Milestone (Year 1):

Remove 200 cubic yards of timber debris from drainageways.

Status:

As shown in the table below, over 300 cubic yards of debris have been removed from DuPage County waterways during the reporting year.

Location	Date	Cubic Yards Debris Removed
Lindenwood Park	3/7/2016	50
Lindenwood Park	3/8/2016	80
Mack Rd. at West Branch DuPage River	May-16	145
East Branch Trib. #7	Jun-16	30
Total	March 1, 2016 to February 28, 2017	305

DUPAGE COUNTY NPDES PERMIT # ILR400502

F3. Municipal Operations, Stormwater Control

Goal:

Develop standard operating procedures and checklists for municipal operators to use to assess the need for pollution prevention measures for wash water, spills, leaks, debris, deicing materials, and other chemicals on their property.

Milestone (Year 1):

10 corrections made in response to assessments.

Status:

During the reporting year, DuPage County staff created a "Good Housekeeping" checklist to be utilized by county, municipal, and township staff in order to self-assess operations and procedures at each facility. The checklist will be updated regularly based on feedback from these agencies as well as to include any new requirements or best practices. The checklist can be found here:

https://www.dupageco.org/EDP/Stormwater Management/Water Quality/54206/

DUPAGE COUNTY NPDES PERMIT # ILR400502

F5. Flood Management/ Assess Guidelines

Goal:

Ensure that new flood management projects assess the impacts on water quality and examine existing projects for incorporation of additional water quality protection devices or practices.

Milestone (Year 1):

Complete 1 watershed plan, or components thereof, approved by the Stormwater Management Planning Committee and County Board per year.

Status:

During the reporting year, DuPage County staff has been working to complete 5 water quality based watershed plans. These plans were funded in part by an IEPA 319 grant for Development of Watershed Plans for Impaired Waterways. The watersheds that are being studied include: St. Joseph Creek, Winfield Creek, Sawmill Creek, Kress Creek, and Klein Creek. Drafts of all 5 watershed plans have been completed and submitted to the IEPA for review.

DuPage County has also partnered with the DuPage River Salt Creek Workgroup and the Chicago Metropolitan Agency for Planning on the Lower Salt Creek Watershed Plan, which is a Water Quality Based plan. Work continued during the reporting year to finalize the Watershed Resource Inventory and work began on the draft Watershed Plan.

DUPAGE COUNTY NPDES PERMIT # ILR400502

SECTION C

Monitoring Data

DuPage County in partnership with the cooperating municipal and township permit holders listed in the cover letter have collected a substantial amount of information, including monitoring data, during the reporting period as members of the DuPage River Salt Creek Workgroup.

The DRSCW water quality monitoring program is made up of two components: 1) Bioassessment and 2) DO monitoring.

BIOASSESSMENT

Overview and Sampling Plan

A biological and water quality survey, or "biosurvey", is an interdisciplinary monitoring effort coordinated on a waterbody specific or watershed scale. This may involve a relatively simple setting focusing on one or two small streams, one or two principal stressors, and a handful of sampling sites or a much more complex effort including entire drainage basins, multiple and overlapping stressors, and tens of sites. The DRSCW bioassessment is the latter. The DRSCW bioassessment program began in 2007 with sampling in the West Branch DuPage River, East Branch DuPage River and Salt Creek watersheds. From 2009-2016, each watershed was sampled on a 3-year rotation beginning with the West Branch DuPage River watershed in 2006. Beginning in 2017, watershed will be sampled in a 5-year rotation ensuring that each watershed will be sampled during the effective period of the ILR40 permit. The bioassessment program functions under a quality assurance plan agreed on with the Illinois Environmental Protection Agency (http://drscw.org/wp/bioassessment/). Table 1 details the bioassessment sampling dates for each DRSCW watershed.

Table 1. Bioassessment sampling dates for the DRSWC watershed

Watershed	Sampling Completed (year)	Sampling Scheduled (year)	
West Branch DuPage River	2007, 2009, 2012, 2015	2020	
East Branch DuPage River	2007, 2011, 2014	2019	
Salt Creek	2007, 2010, 2013, 2016	2021	

The DRSCW bioassessment program utilizes standardized biological, chemical, and physical monitoring and assessment techniques employed to meet three major objectives:

- 1) Determine the extent to which biological assemblages are impaired (using IEPA guidelines);
- 2) Determine the categorical stressors and sources that are associated with those impairments; and,

DUPAGE COUNTY NPDES PERMIT # ILR400502

3) Add to the broader databases for the DuPage River and Salt Creek watersheds to track and understand changes through time in response to abatement actions or other influences.

The data collects as part of the bioassessment is processed, evaluated, and synthesized as a biological and water quality assessment of aquatic life use status. The assessments are directly comparable to previously conducted bioassessments such that trends in status can be examined and causes and sources of impairment can be confirmed, amended, or removed. A final report containing a summary of major findings and recommendations for future monitoring, follow-up investigations, and any immediate actions that are needed to resolve readily diagnosed impairments is prepared following each bioassessment. The bioassessment reports are posted on the DRSCW at http://drscw.org/wp/bioassessment/. It is not the role of the bioassessments to identify specific remedial actions on a site specific or watershed basis. However, the baseline data provided by the bioassessments contributes to the Integrated Priority System that was developed to help determine and prioritize remedial projects (http://drscw.org/wp/projectidentification-and-prioritization-system/).

Sampling sites for the bioassessment were determined systematically using a geometric design supplemented by the bracketing of features likely to exude an influence over stream resource quality, such as CSOs, dams and wastewater outfalls. The geometric site selection process starts at the downstream terminus or "pour point" of the watershed (Level 1 site), then continues by deriving each subsequent "panel" at descending intervals of one-half the drainage area (D.A.) of the preceding level. Thus, the drainage area of each successive level decreases geometrically. This results in in seven drainage area levels in each of the three watersheds, starting at the largest (150 sq. mi) and continuing through successive panels of 75, 38, 19, 9, 5 and 2 sq. mi. Targeted sites are then added to fill gaps left by the geometric design and assure complete spatial coverage in order to capture all significant pollution gradients including reaches that are impacted by wastewater treatment plants (WWTPs), major stormwater sources, combined sewer overflows (CSOs) and dams. The number of sampling sites by method/protocol and watershed are listed in Table 2 and illustrated in Figure 1.

Representativeness - Reference Sites

Data is collected from selected regional reference sites in northeastern Illinois preferably to include existing Illinois EPA and Illinois DNR reference sites, potentially being supplemented with other sites that meet the Illinois EPA criteria for reference conditions. One purpose of this data will be to index the biological methods used in this study that are different from Illinois EPA and/or DNR to the reference condition and biological index calibration as defined by Illinois EPA.

In addition, the current Illinois EPA reference network does not yet include smaller headwater streams, hence reference data is needed to accomplish an assessment of that data. Presently thirteen (13) reference sites have been established.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Table 2. Number of sampling sites in the DRSCW project area.

Method/Protocol	West Branch DuPage River (2013)	East Branch DuPage River (2014)	Salt Creek (2016)	Reference Sites (2006- 2016)	Total Sites
Biological sampling					
Fish	44	36	51	13	144
Macroinvertebrates	44	36	51	13	144
QHEI	44	36	51	13	144
Water Column Chemical/Physical Sampling					
Nutrients*	44	36	51	6	137
Water Quality Metals	44	36	51	6	137
Water Quality Organics	18	11	16	6	51
Sediment Sampling	18	11	16	6	51

^{*}Also included indicators or organic enrichment and ionic strength, total suspended solids (TSS), DO, pH and temperature

The bioassessment sampling includes four (4) sampling methods/protocols: biological sampling, Qualitative Habitat Evaluation Index (QHEI), water column chemical/physical parameter sampling and sediment chemistry. The biological sampling includes two assemblages: fish and macroinvertebrates.

FISH

Methodology

Methods for the collection of fish at wadeable sites was performed using a tow-barge or longline pulsed D.C. electrofishing apparatus (MBI 2006b). A Wisconsin DNR battery powered backpack electrofishing unit was used as an alternative to the long line in the smallest streams (Ohio EPA 1989). A three-person crew carried out the sampling protocol for each type of wading equipment sampling in an upstream direction. Sampling effort was indexed to lineal distance and ranged from 150-200 meters in length. Non-wadeable sites were sampled with a raft-mounted pulsed D.C. electrofishing device in a downstream direction (MBI 2007). Sampling effort was indexed to lineal distance over 0.5 km. Sampling was conducted during a June 15-October 15 seasonal index period.

Samples from each site were processed by enumerating and recording weights by species and by life stage (y-o-y, juvenile, and adult). All captured fish were immediately placed in a live well, bucket, or live net for processing. Water was replaced and/or aerated regularly to maintain adequate D.O. levels in the water and to minimize mortality. Fish not retained for voucher or other purposes were released back into the water after they had been identified to species,

DUPAGE COUNTY NPDES PERMIT # ILR400502

examined for external anomalies, and weighed either individually or in batches. While the majority of captured fish were identified to species in the field, any uncertainty about the field identification required their preservation for later laboratory identification. Identification was made to the species level at a minimum and to the sub-specific level if necessary. Vouchers were deposited and verified at The Ohio State University Museum of Biodiversity (OSUMB) in Columbus, OH.

Results

The fish sampling results presented in this report summarize the findings for the mainstem reaches of the East Branch DuPage River, the West Branch DuPage River and Salt Creek. Information on the tributaries and detailed analysis of all results can be found at http://drscw.org/wp/bioassessment/.

The fish and macroinvertebrate results are presented as Index of Biotic Integrity (IBI) scores. IBI is an evaluation of a waterbodies biological community in a manner that allows the identification, classification and ranking of water pollution and other stressors. IBIs allow the statistical association of various anthropogenic influences on a water body with the observed biological activity in said water body and in turn the evaluation of management interventions in a process of adaptive management. Chemical testing of water samples produce only a snapshot of chemical concentrations while an IBI allows an evaluation of the net impact of chemical, physical and flow variables on a biological community structure. Dr. James Karr formulated the IBI concept in 1981.

East Branch DuPage River

Fish assemblage conditions throughout the East Branch DuPage River watershed a in the poor and fair ranges (Figure 1). However, the mainstem assemblages show similar quality or modest improvement at nearly all sites when 2014 data is compare to 2011 and approach 2007 levels. Prior to the modification of the Churchill Woods dam in 2001, fish assembles upstream of the dam, were essentially that of a pond and dominated by sunfish, bullheads, golden shiner, and mosquito fish. Downstream of the dam, the fish assemblage reflected more lotic, stream like conditions with populations of sand shiner, johnny darter, horneyhead chub and rock bass. Since the modification of the Churchill Woods dam, eight new species have been recorded and other populations have expanded their ranges above the former dam site. Additionally, in 2014, two new species (banded darter and round goby) were recorded in the lower reaches of the East Branch. The appearance of the banded darter, a sensitive species, is a sign of improved quality in the lower nine miles of the main stem.

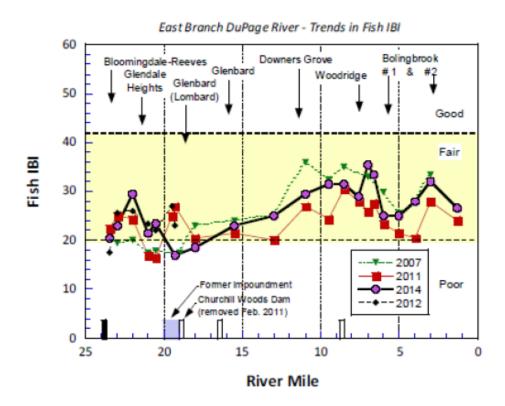

West Branch DuPage River

All survey sites fell consistently in the poor or lower fair ranges with slightly higher scores downstream from RM 8.1 and the Fawell Dam (Figure 2). No West Branch sites met the 41-point criterion synonymous with a good quality assemblage.

DUPAGE COUNTY NPDES PERMIT # ILR400502

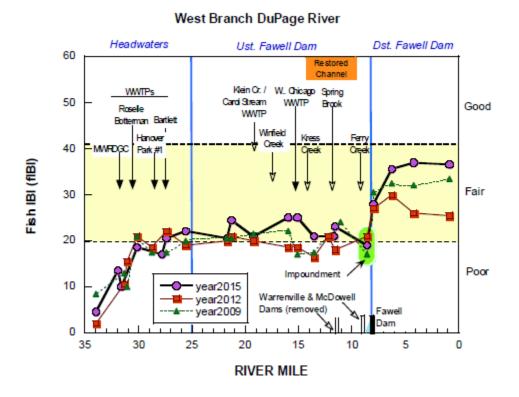

It should be noted that the Fawell dam is a barrier to several fish species. The DRSCW in cooperation with DuPage County and Forest Preserve District of DuPage County plans to modify the Fawell Dam to allow for fish passage. This project is expected to be completed by 2018.

Figure 1. Fish IBI scores in the East Branch DuPage River, 2014, 2011-12 and 2007 in relation to municipal POTW dischargers. Bars along the x-axis depict mainstem dams or weirs (only black bars impede fish passage). The shaded area demarcates the "fair" narrative range.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Figure 2. Fish IBI scores in the West Branch DuPage River, 2015, 2011-12 and 2007 in relation to municipal POTW dischargers. Bars along the x-axis depict mainstem dams or weirs (only black bars impede fish passage). The shaded area demarcates the "fair" narrative range.

Salt Creek

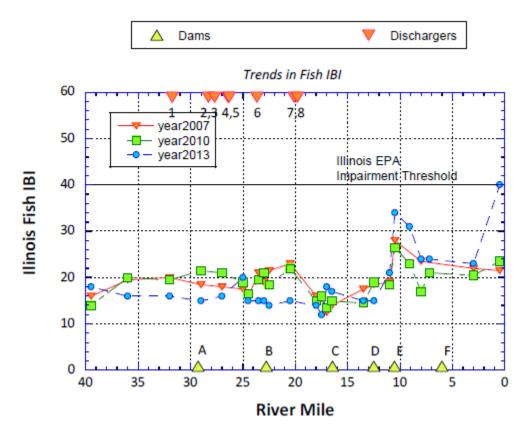

With the exception of the site located at River Mile 0.5, fish assemblages sampled in Salt Creek were in poor to fair condition throughout the mainstem (Figure 3). In 2013, the site near the mouth of Salt Creek (river mile 0.5) was rated "good". The increase in fish iBi is attributed to the removal of the Hoffman Dam on the main stem of the Des Plaines River in June 2012.

It should be noted that the Fullersburg Woods Dam (dam E on Figure 4) is a barrier to several fish species, notably johnny darters and hornyhead chubs, two species that should be found throughout most of the mainstem. The DRSCW in cooperation with DuPage County and Forest Preserve District of DuPage County plans to modify the Fullersburg Woods Dam to allow for fish passage. This project is expected to be completed by 2023.

Fish assemblage data from the 2016 Salt Creek bioassessment was not available at the time of the 2016-2017 MS4 Annual Report and will be included in the 2017-2018 MS4 Annual Report due on June 1, 2018.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Figure 3. Fish IBI scores in Salt Creek, 2013, 2010, and 2007 in relation to municipal POTW dischargers. Triangles along the x-axis depict mainstem dams or weirs. The back line demarcates the IEPA impairment threshold.

MACROINVERTEBRATES

Methodology

The macroinvertebrate assemblage is sampled using the Illinois EPA (IEPA) multi-habitat method (IEPA 2005). Laboratory procedures followed the IEPA (2005) methodology for processing multihabitat samples by producing a 300-organism subsample with a scan and prepick of large and/or rare taxa from a gridded tray. Taxonomic resolution is performed to the lowest practicable resolution for the common macroinvertebrate assemblage groups such as mayflies, stoneflies, caddisflies, midges, and crustaceans, which goes beyond the genus level requirement of IEPA (2005). However, calculation of the macroinvertebrate IBI followed IEPA methods in using genera as the lowest level of taxonomy for mIBI calculation and scoring.

Results

The macroinvertebrate sampling results presented in this report summarize the findings for the mainstem reaches of the East Branch DuPage River, the West Branch DuPage River and Salt

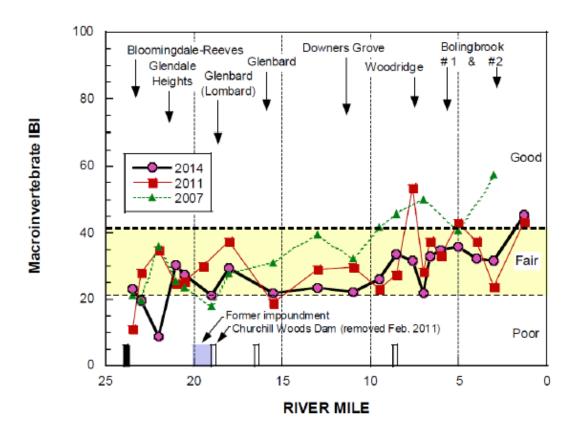

DUPAGE COUNTY NPDES PERMIT # ILR400502

Creek. Information on the tributaries and detailed analysis of all results can be found at http://drscw.org/wp/bioassessment/.

East Branch DuPage River

Macroinvertebrate collections from the 2014 East Branch watershed survey fell entirely within the fair or poor quality ranges with the exception of a single "good" site on the lower mainstem (Figure 4). Assemblages throughout the study area are predominated by facultative and tolerant organisms most often associated with elevated nutrients, dissolved solids and low DO.

Figure 4. Macroinvertebrate IBI scores in the East Branch DuPage River, 2014, 2011-12 and 2007 in relation to municipal POTW dischargers. Bars along the x-axis depict mainstem dams or weirs (only black bars impede fish passage). The shaded area demarcates the "fair" narrative range.

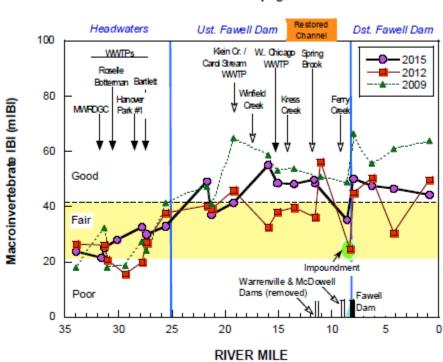

West Branch DuPage River

With few exceptions, West Branch macroinvertebrate assemblages from the upper, headwater reach reflected degraded but similar quality between 2007, 2009, 2012 and 2015 (Figure 5). The combination urban drainage, marginal habitat quality and a series of four major WWTP discharges in the small drainage were considered major contributors.

DUPAGE COUNTY NPDES PERMIT # ILR400502

In both 2009 and 2015, major improvement in mIBI scores and clearly good mIBI ratings were detected upstream from Klein Creek and the Carol Stream WWTP (Figure 5). In 2009 and 2015, consistently good quality was maintained along the remaining length of the West Branch downstream to the mouth. In 2006, this downstream improving trend was more erratic; still 5 of the 8 sites between Klein Creek and the mouth exceeded Illinois criteria. In contrast, the 2012 trend was much less distinct as narrative ratings vacillated between a fair or lower good range status through most of the lower 20 mainstem river miles.

Figure 5. Macroinvertebrate IBI scores in the West Branch DuPage River, 2015, 2011-12 and 2007 in relation to municipal POTW dischargers. Bars along the x-axis depict mainstem dams or weirs (only black bars impede fish passage). The shaded area demarcates the "fair" narrative range.

West Branch Dupage River

Salt Creek

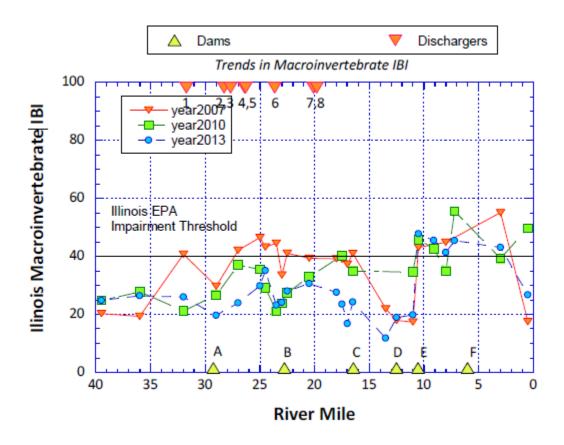

In 2013, macroinvertebrate communities sampled from the mainstem of Salt Creek were rated as Fair upstream from the Fullersburg Woods Dam, and rated good at five of six sites sampled downstream from the dam, and Fair at the other site (Figure 6). Longitudinally, scores decreased downstream from Spring Brook relative to those upstream. The confluence with Spring Brook marks the reach where several POTWs discharge in short succession. Otherwise, no clear longitudinal pattern was evident.

DUPAGE COUNTY NPDES PERMIT # ILR400502

In the 2016, the Oak Meadows Dam (dam B on Figure 4) was removed in a project sponsored by the Forest Preserve District of DuPage County, DuPage County Stormwater Management, and the DRSCW. Macroinvertebrate sampling to document the effects of this dam removal is scheduled for 2017.

Macroinvertebrate data from the 2016 Salt Creek bioassessment was not available at the time of the 2016-2017 MS4 Annual Report and will be included in the 2017-2018 MS4 Annual Report due on June 1, 2018.

Figure 6. Macroinvertebrate IBI scores in Salt Creek, 2013, 2010, and 2007 in relation to municipal POTW dischargers. Triangles along the x-axis depict mainstem dams or weirs. The back line demarcates the IEPA impairment threshold.

HABITATMethodology

Physical habitat was evaluated using the Qualitative Habitat Evaluation Index (QHEI) developed by the Ohio EPA for streams and rivers in Ohio (Rankin 1989, 1995; Ohio EPA 2006b) and as modified by MBI for specific attributes. Attributes of habitat are scored based on the overall

DUPAGE COUNTY NPDES PERMIT # ILR400502

importance of each to the maintenance of viable, diverse, and functional aquatic faunas. The type(s) and quality of substrates, amount and quality of instream cover, channel morphology, extent and quality of riparian vegetation, pool, run, and riffle development and quality, and gradient used to determine the QHEI score which generally ranges from 20 to less than 100. QHEI scores and physical habitat attribute were recorded in conjunction with fish collections.

Results

The QHEI data presented in this report summarize the findings for the mainstem reaches of the East Branch DuPage River, the West Branch DuPage River and Salt Creek. Information on the tributaries and detailed analysis of all results can be found at http://drscw.org/wp/bioassessment/.

The physical habitat of a stream is a primary determinant of biological quality. Streams in the glaciated Midwest, left in their natural state, typically possess riffle-pool-run sequences, high sinuosity, and well-developed channels with deep pools, heterogeneous substrates and cover in the form of woody debris, glacial tills, and aquatic macrophytes. The QHEI categorically scores the basic components of stream habitat into ranks according to the degree to which those components are found in a natural state, or conversely, in an altered or modified state.

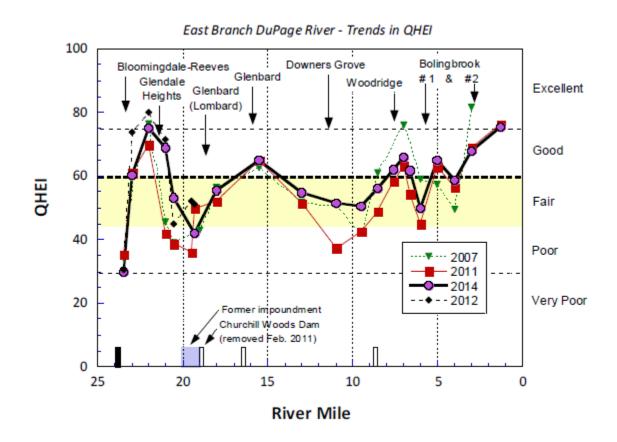

East Branch DuPage River

Based on QHEI scores, mainstem habitat quality fell mostly in the fair to good ranges, but varied by location (Figure 7). Substrate embeddedness was a common characteristic of the mainstem as riffle or pool embeddedness was recorded at all but one location (EB23/RM 22.0).

Since the modification of the Churchill Woods dam in 2011, QHEI scores within and upstream of the former dam have increased by reflecting the appearance of riffles and increased habitat heterogeneity.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Figure 7. Qualitative Habitat Evaluation Index (QHEI) scores for the E. Branch DuPage River in 2007, 2011-12, and 2014 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). The shaded region depicts the range of QHEI scores where habitat quality is marginal and limiting to aquatic life. QHEI scores less than 45 are typical of highly modified habitat.

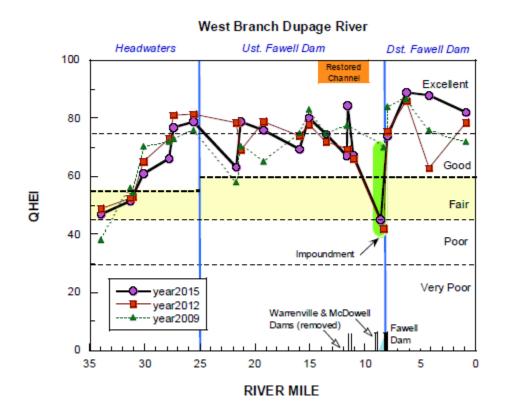

West Branch DuPage River

Mainstem habitat quality in 2012 was good to excellent throughout most of its length and, with the exception of the extreme headwaters (upstream RM 30.1) and Fawell Dam pool (RM 8.3) (Figure 8).

DUPAGE COUNTY NPDES PERMIT # ILR400502

Figure 8. Qualitative Habitat Evaluation Index (QHEI) scores for the W. Branch DuPage River in 2009, 2012, and 2015. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). The shaded region depicts the range of QHEI scores where habitat quality is marginal and limiting to aquatic life. QHEI scores less than 45 are typical of highly modified habitat

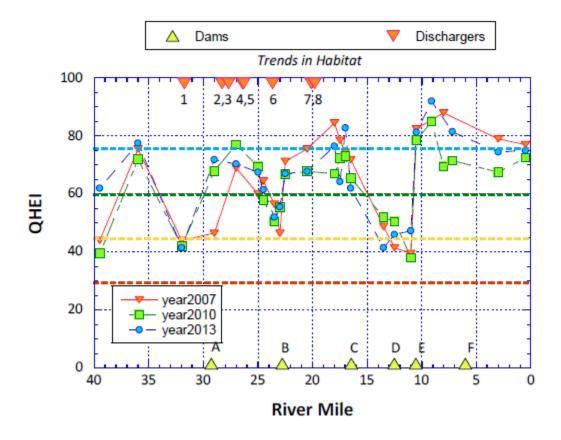

Salt Creek

In Salt Creek, the majority of the sites possessed the types and amounts of habitat features necessary to support aquatic life consistent with beneficial uses (Figure 49 a), with QHEI scores in the good and excellent range (Figure 9). Perhaps more telling, 19 of the sites possessed none of the attributes that characterized stream channels highly modified either directly or indirectly by anthropogenic modifications, and only one site, the most upstream site, possessed more than one highly modified attribute.

QHEI data from the 2016 Salt Creek bioassessment was not available at the time of the 2016-2017 MS4 Annual Report and will be included in the 2017-2018 MS4 Annual Report due on June 1, 2018.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Figure 9. Qualitative Habitat Evaluation Index (QHEI) scores for Salt Creek in 2007, 2010 and 2013 in relation to municipal WWTP discharges. Triangles along the x-axis depict mainstem dams or weirs. The shaded region depicts the range of QHEI scores where habitat quality is marginal and limiting to aquatic life. QHEI scores less than 45 are typical of highly modified habitat.

WATER QUALITY CHEMISTRY

Methodology

Water column and sediment samples are collected as part of the DRSCW bioassessment programs. The total number of sites sampled is detailed in Table 2. Total number of collected samples by watershed typical for a full assessment by watershed are given in Table 3. The number of samples collected at each site is largely a function of the sites drainage area with the frequency of sampling increasing as drainage size increases (Table 4). Organics sampling is a single sample done at a subset of sites. Sediment sampling is done at a subset of 66 sites using the same procedures as IEPA.

DUPAGE COUNTY NPDES PERMIT # ILR400502

The parameters sampled for are included in Table 6 and can be grouped into demand parameters, nutrients, demand, metals and organics. Locations of organic and sediment sites are shown on Figure 2. All sampling occurs between June and October of the sample year. The Standard Operating Procedure for water quality sampling can be found at http://drscw.org/wp/bioassessment/.

Table 3. Total number of samples by watershed typical for a full assessment by watershed

Watershed	Approximate # Sites	Demand Samples	Nutrients Samples	Metals Samples	Organics Samples
Salt Creek	51	280	280	149	16
West Branch DR	44	218	218	110	18
East Branch DR	36	196	196	100	11

Table 4. Approximate distribution of sample numbers by drainage area across the monitoring area.

DUPAGE COUNTY NPDES PERMIT # ILR400502

Results

The discussion presented below focuses on the constituents listed in the MS4 permit: total suspended solids, total nitrogen, total phosphorus, fecal coliform, chlorides, and oil and grease. Total nitrogen is presented as ammonia, nitrate, and total kjeldahl nitrogen (TKN). Prior to the 2016 sampling period, fecal coliform and oil and grease sampling was not conducted. Oil and grease sampling was added to the bioassessment sampling for Salt Creek in 2016. Fecal coliform and oil and grease sampling will be added to all future bioassessment sampling for the East Branch DuPage River (2019), West Branch DuPage River (2020), and Salt Creek (2021) ensuring that each watershed will be sampled for that parameter during the effective period of the ILR40 permit.

Detailed analysis and results for the other water quality constituents is located at http://drscw.org/wp/bioassessment/.

East Branch DuPage River

East Branch mainstem flows are effluent dominated during the late summer-early fall months. As such, chemical water quality is highly influenced by the concentration and composition of chemical constituents in WWTP effluents (Figures 10-13). The results in 2014 were consistent with 2011 during low flow periods with respect to observing no exceedances of Illinois water quality criteria for regulated parameters (i.e. TSS, NH₃-N).

West Branch DuPage River

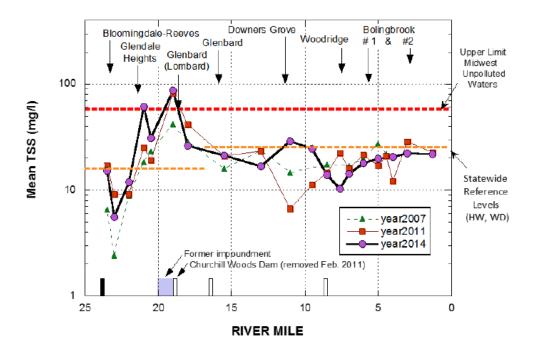

Stream flow in the West Branch DuPage River is effluent dominated during summer months. As such, its water quality is highly influenced by the concentrations and composition of chemical constituents in the effluent as well as runoff from the urban and developed land cover in the watershed. Water quality sampling in 2012 during the summer low-flow periods suggest that the quality of treated effluent, with respect to regulated parameters (i.e., cBOD5, TSS, NH3), was generally good. Effluents did not result directly in exceedances of water quality standards for these parameters. However, increasingly elevated nutrient levels and their attendant influence on mainstem D.O. regimes remain problematic.

Salt Creek

Salt Creek drains a highly urbanized landscape with a high population density. The increase in Pollutants associated with urbanized landscapes have been documented. Given the high population density in the watershed, treated municipal effluent comprises a significant fraction of the total flow in Salt Creek and strongly influences water quality, especially with respect to nitrogen and phosphorus. The results in 2013 were consistent with 2010.

Water chemistry data from the 2016 Salt Creek bioassessment was not available at the time of the 2016-2017 MS4 Annual Report and will be included in the 2017-2018 MS4 Annual Report due on June 1, 2018.

Figure 10. Concentrations of total suspended solids (top panel) and TKN (lower panel) from E. Branch DuPage River samples in 2007, 2011 and 2014 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). Red dashed lines shows the upper limits of concentrations typical for relatively unpolluted waters for TSS (McNeeley et al. 1979). Orange dashed line in TSS plot is the Ohio reference threshold for headwater (HW) and wadeable (WD) streams. For TKN, the orange dashed line represents the IPS threshold (1.0 mg/l). IPS is a tool developed by the DRSCW and MBI.

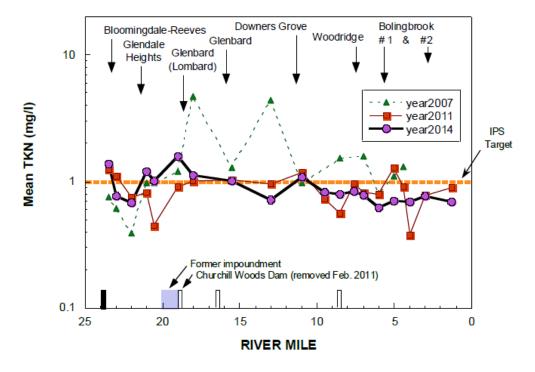

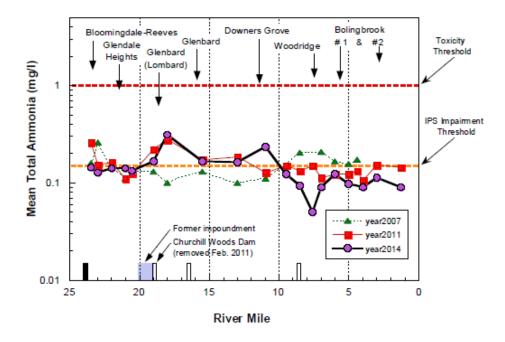

Figure 11. Concentrations of ammonia-N (top panel) and nitrate+nitrite-N (lower panel) from E. Branch DuPage River samples in 2007, 2011 and 2014 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (only black bars for dams that impede fish passage). For ammonia-N, the red dashed line (1.0 mg/l) represents a threshold concentration beyond which acute toxicity is likely; the orange dashed line (0.15 mg/l) is correlated with impaired biota in the IPS study. For nitrate+nitrite-N, orange dashed lines represent target concentrations for ecoregion 54 (1.8 mg/l) and the Illinois EPA non-standard based criteria (7.8 mg/l). The red dashed line is the Illinois water quality criterion for public water supplies (10 mg/l).

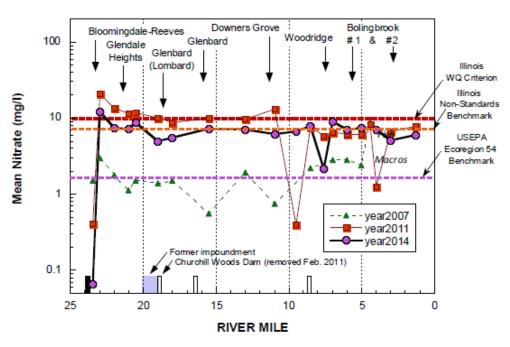

Figure 12. Concentrations total phosphorus from E. Branch DuPage River samples in 2007, 2011 and 2014 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). For phosphorus, orange dashed lines represent target concentrations for ecoregion 54 (0.07 mg/l) and the Illinois EPA non-standard based criterion (0.61 mg/l). The 1.0 mg/l dashed red line is the suggested effluent limit.

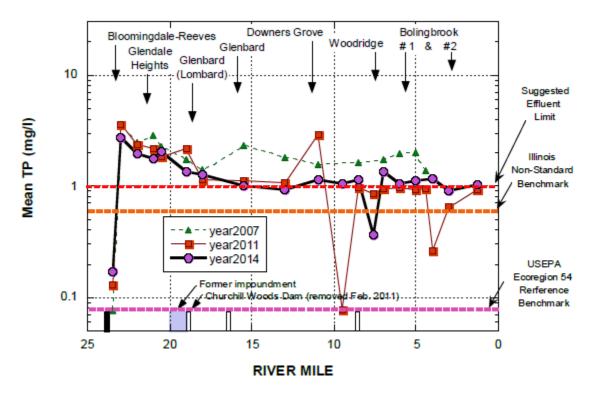

Figure 13. Chloride concentrations from the East Branch DuPage River in the summer of 2007, 2011 and 2014.

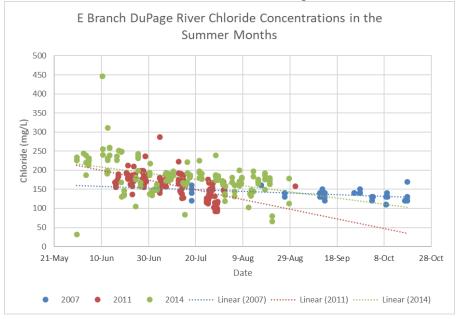

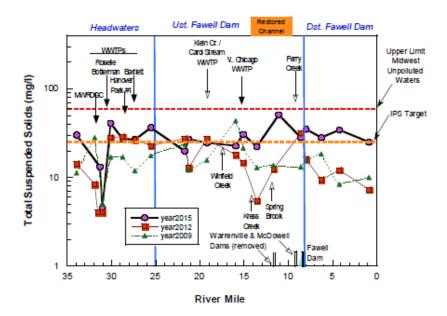

Figure 14. Concentrations of total suspended solids (top panel) and TKN (lower panel) from W. Branch DuPage River samples in 2008, 2012 and 2015 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). Red dashed lines shows the upper limits of concentrations typical for relatively unpolluted waters for TSS (McNeeley et al. 1979). Orange dashed line in TSS plot is the Ohio reference threshold for headwater (HW) and wadeable (WD) streams. For TKN, the orange dashed line represents the IPS threshold (1.0 mg/l). IPS is a tool developed by the DRSCW and MBI.

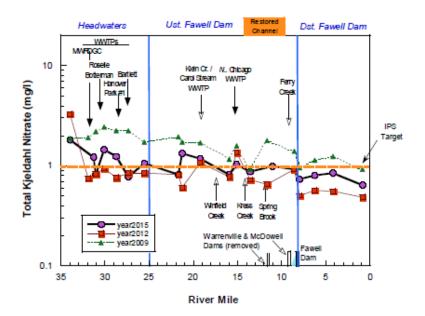

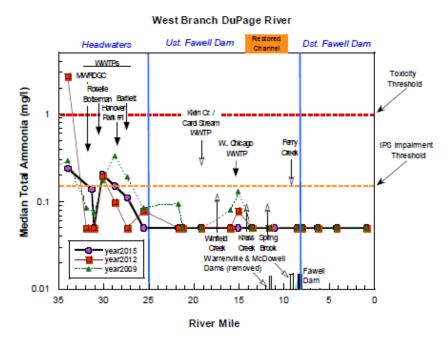

Figure 15. Concentrations of ammonia-N (top panel) and total nitrate (lower panel) from W. Branch DuPage River samples in 2008, 2012 and 2015 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (only black bars for dams that impede fish passage). For ammonia-N, the red dashed line (1.0 mg/l) represents a threshold concentration beyond which acute toxicity is likely; the orange dashed line (0.15 mg/l) is correlated with impaired biota in the IPS study. For total nitrate, red line represents the Illinois Water Quality Criterion, orange dashed line represents the Illinois Non-Standards Benchmark, and purple line represents the US Ecoregion 54 Benchmark.

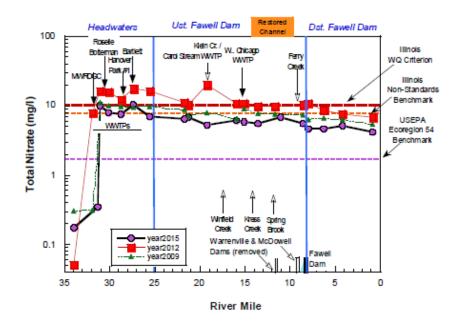

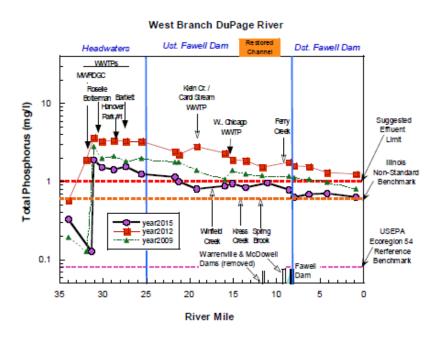

Figure 16. Concentrations total phosphorus (top panel) and chloride (lower panel) from W. Branch DuPage River samples in 2008, 2012 and 2015 in relation to municipal WWTP discharges. Bars along the x-axis depict mainstem dams or weirs (black bars are dams that impede fish passage). For phosphorus, orange dashed lines represent target concentrations for ecoregion 54 (0.07 mg/l) and the Illinois EPA non-standard based criterion (0.61 mg/l). The 1.0 mg/l dashed red line is the suggested effluent limit. For chloride, red dashed line represents the Illinois Water Quality Criterion (500 mg/L) and orange dashed lines represent the IPS threshold for fish and macroinvertebrates. IPS is a tool developed by the DRSCW and MBI.

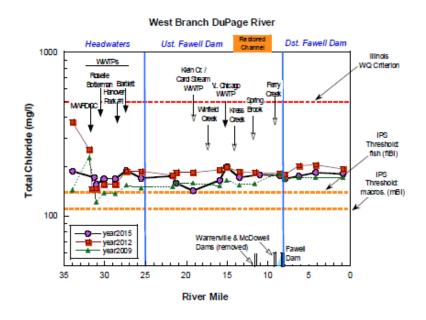

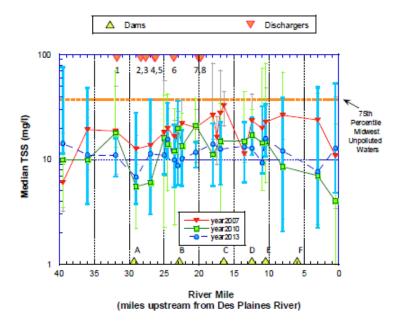

Figure 17. Concentrations of total suspended solids (top panel) and TKN (lower panel) from Salt Creek samples in 2007, 2010 and 2013 in relation to municipal WWTP discharges. Yellow triangles along the x-axis depict mainstem dams or weirs. Orange dashed lines shows the upper limits of concentrations typical for relatively unpolluted waters for TSS (McNeeley et al. 1979). Blue dashed line in TSS plot is the Ohio reference threshold for headwater (HW) and wadeable (WD) streams. For TKN, orange dashed line represents the IPS threshold (1.0 mg/l). IPS is a tool developed by the DRSCW and MBI.

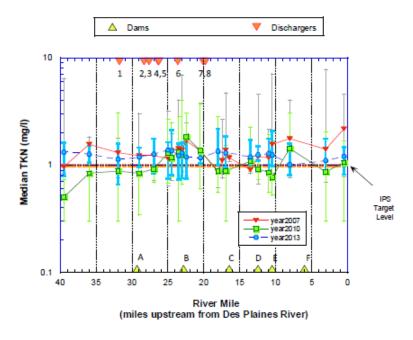

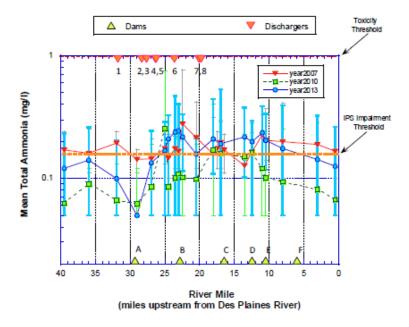

Figure 18. Concentrations of ammonia-N (top panel) and total nitrate (lower panel) from Salt Creek samples in 2007, 2010 and 2013 in relation to municipal WWTP discharges. Yellow triangles along the x-axis depict mainstem dams or weirs. For ammonia-N, the blue dashed line (1.0 mg/l) represents a threshold concentration beyond which acute toxicity is likely; the orange dashed line (0.15 mg/l) is correlated with impaired biota in the IPS study. For total nitrate, red line represents the Illinois Water Quality Criterion, orange dashed line represents the Illinois Non-Standards Benchmark, and purple line represents the US Ecoregion 54 Benchmark.

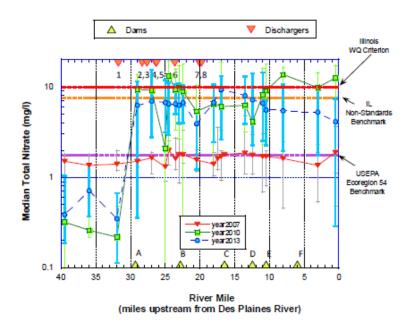

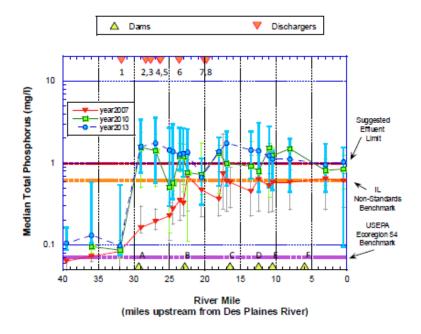

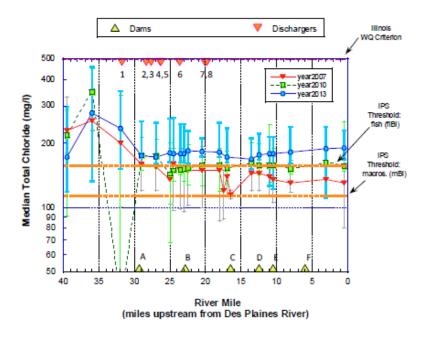

Figure 19. Concentrations total phosphorus (top panel) and chloride (lower panel) from Salt Creek samples in 2007, 2010, and 2013 in relation to municipal WWTP discharges. Yellow triangles along the x-axis depict mainstem dams or weirs. For phosphorus, purple dashed lines represent target concentrations for ecoregion 54 (0.07 mg/l) and orange dashed line represents the Illinois EPA non-standard based criterion (0.61 mg/l). The 1.0 mg/l dashed red line is the suggested effluent limit. For chloride, red dashed line represents the Illinois Water Quality Criterion (500 mg/L) and orange dashed lines represent the IPS threshold for fish and macroinvertebrates. IPS is a tool developed by the DRSCW and MBI.

DISSOLVED OXYGEN (DO) MONITORING

Background and Methodology

The Illinois Environmental Protection Agency (IEPA) report, Illinois 2004 Section 303(d) List, listed dissolved oxygen (DO) as a potential impairment in Salt Creek, and the East and West Branches of the DuPage River. The report suggested that the DO levels in selected reaches of these waterways might periodically fall to levels below those required by healthy aquatic communities.

All rivers and creeks in DuPage County are classified as General Use Waters. The present water quality standards for dissolved oxygen in General Use Waters is:

- 1. During the period of March through July
 - a. 5.0 mg/L at any time; and
 - b. 6.0 mg/L as a daily mean averaged over 7 days.
- 2. During the period of August through February,
 - a. 3.5 mg/L at any time;
 - b. 4.0 mg/L as a daily minimum averaged over 7 days; and
 - c. 5.5 mg/L as a daily mean averaged over 30 days.

Following listing on the 303 (d) list three TMDLs were prepared by the IEPA for Salt Creek and the East Branch of the DuPage River. In response to the TMDLs, the DRSCW committed to develop and manage a continuous long-term DO monitoring plan for the project area in order to assess the nature and extent of the DO impairment and to allow the design of remedial projects. The continuous DO data is also used to assess the impact of DO improvement projects such as the Churchill Woods and Oak Meadow dam removals.

Typically, the continuous DO monitoring project includes two to three (2-3) sites on the West Branch DuPage River, four to five (4-5) sites of the East Branch DuPage River, and three to four (3-4) sites on Salt Creek. The program began in 2006 and data has been collected each year since. Each site is equipped with a HydroLab DS 5X which collects data on DO, pH, conductivity and water temperature. Stations have a sample interval of one hour and collect data from June through to October (the seasonal period recognized as containing the lowest annual levels of stream DO). The continuous DO monitoring program functions under a quality assurance plan agreed on with the Illinois Environmental Protection Agency

(http://drscw.org/wp/dissolvedoxygen/). Details on the site location are included in Table 1 and site locations are included on Map 5.

DUPAGE COUNTY NPDES PERMIT # ILR400502

 Table 5.
 Continuous DO monitoring locations in the DRSCW watersheds

Site ID	Stream Name	River Mile	Latitude	Longitude	Location
WBAD	W. Br. DuPage R.	29.9	41.9750	-88.1386	Arlington Drive

DUPAGE COUNTY NPDES PERMIT # ILR400502

SECTION D

Proposed activities during the next reporting cycle:

As indicated previously in this report, DuPage County Stormwater provides many water quality services to municipalities and townships in order to comply with the NPDES permit No. ILR40. During the next reporting cycle, DuPage County plans to formalize this partnership by submitting an NOI for coverage under the ILR40 as co-permittees with the municipalities and townships within DuPage County. Intergovernmental agreements will be drafted which outline the responsibilities of each agency. It is our goal to eliminate redundancies and increase efficiency by providing one comprehensive report that covers the six minimum control measures for the entire County.

DUPAGE COUNTY NPDES PERMIT # ILR400502

SECTION E

Reliance on other government entities:

The forty-one cooperating permit holders listed in the cover letter rely on established DuPage County programs to satisfy some of the General NPDES Permit No. ILR40 obligations for the six minimum control measures; Public Education and Outreach, Public Participation/ Involvement, Illicit Discharge Detection and Elimination, Construction Site Runoff Control, Post-Construction Runoff Control, and Pollution Prevention/ Good Housekeeping.

DUPAGE COUNTY NPDES PERMIT # ILR400502
